

# GIATA MultiCodes

## Outsource all your mapping issues – save on labour costs, complaint volumes & payouts!

GIATA MultiCodes is a hotel matching service that enables a unique identification and a simplified, well-structured maintenance of your hotel master data. As a result, this helps to avoid hotel matching errors and duplicates in your own booking or distribution system, especially if you are working with large portfolios from multiple suppliers.

In order to respond to these complex demands, GIATA has compiled the GIATA MultiCodes database, which comprises the mandatory module GIATA Codes and the following optional modules: Supplier and Tour Operator Codes, GIATA GeoCodes, GIATA Hotel Addresses and Affiliations to Chains or Groups. Clients can retrieve mappings for about 500 suppliers, including Amadeus, Expedia EAN, GTA, Hotelbeds, Priceline Partner Network, Sabre, Tourico, Travelport and many more. All data will be continuously updated and augmented.

### GIATA Code 7108
